

Scenario

Review the scenario. Then complete the step-by-step instructions.

You are a level-one security operations center (SOC) analyst at a financial services company. Previously, you received a phishing alert about a suspicious file being downloaded on an employee's computer. After investigating the email attachment file's hash, the attachment has already been verified malicious. Now that you have this information, you must follow your organization's process to complete your investigation and resolve the alert.

Your organization's security policies and procedures describe how to respond to specific alerts, including what to do when you receive a phishing alert.

In the playbook, there is a flowchart and written instructions to help you complete your investigation and resolve the alert. At the end of your investigation, you will update the alert ticket with your findings about the incident.

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
During work hours, an employee may have been a target of a phishing attempt. This employee at the company has downloaded a suspicious file at his assigned computer. -severity : medium may require escalation After looking the file's hash in VirusTotal : -threat category : trojan -it points to a harmful web address : http://org.misecure.com/index.html -it has multiple TTPs behaviours : Execution,Persistence,Privilege escalation,Defense Evasion,Credential access... Moreover, the sender's email is highly suspicious while containing grammatical errors as well as a file attached to it. After investigating the email attachment file's hash, the attachment has already been verified malicious. Ticket status updated to Escalated and need a level-two SOC analyst for the issue
